

## Youth Program 2009

In keeping with Austin's musical theme we will be building radios during the Youth Program workshops. These radios really work and the kits include everything from ear phones and electronics to antennas.

The 2009 Youth Program will consist of two workshops where we will hear about EMC (Electromagnetic Compatibility), build our own radios, learn how they work, and use them to demonstrate some basic EMC principles. There will also be a guided tour on Thursday morning of the exhibition floor where the experts will show us their newest and coolest EMC gadgets. This tour is open to adults, as well as the youth.

**We encourage all interested participants to register** for the Youth Program so that an adequate number of radio kits can be prepared. The Youth Program is recommended for ages 8 to 17; younger children are welcome and would benefit with help from adults or older siblings. Also, to avoid confusion, it should be noted that Youth Program registration does not include access to the Companion Suite or food.

We are delighted to have once again this year, **International Certification Services, Inc.** (ICSI), Minnesota, as Patron of the Youth Program. ICSI has been our Patron for at least the past five years, which has enabled us to keep this program free of charge. Duane Bagdons, President of ICSI, will be one of this year's guest speakers on Ham Radio.

### Schedule of Events

Tuesday 10 to 11:30  
Youth Program intro to EMC and build a radio

Wednesday 10 to 11:30  
Youth Program EMC talk and finish radio

Thursday 10 to 11:30  
Companion and Youth Program Exhibition Hall Tour
